## WATER TREATMENT FOR DIALYSIS - MEDICAL

### Water Treatment for Dialysis

High quality, reliable water systems play a critical role in providing superior patient care. Better Water, Inc are experts in the field of water systems for dialysis. We understand that water systems for dialysis must be superior, in order to supply the high quality water that dialysis demands. From the system design, to installation, and after install support, Better Water Inc provides the solutions and service you need. Our strong commitment to patient safety, customer satisfaction, regulation compliance, and technology innovation, are the driving forces behind the Better Water, Inc product line.

### Solutions

Better Water, Inc offers turn key solutions to the dialysis provider. Using our Decision Making Process (DMP's), BWI reviews the feed water analysis, along with the clinical demands for RO water. We then design a water system specifically for your facility. Pretreatment, filtration, reverse osmosis, and ultra-filtration all combine to provide you with a high quality, reliable system that will produce the pure water that a dialysis patient requires. All of our systems carry a 510k certificate from the FDA and are designed to meet or exceed AAMI RD: 62 on RO quality water for dialysis. Each system is individually tested prior to shipping. Equipment includes enclosed UL 508A, panels.

We have over 2000 parts and consumables in inventory and ready to ship!

#### Typical Central System Components

- Blend valve
- Boost Pump
- Sediment, Carbon and Softener Filters
- Reverse Osmosis Unit
- Post treatment filtration
- Storage tanks on indirect feed systems
- DI Connections
- Alarm and monitoring packages

#### Features and Benefits

- FDA 510k System
- Enclosed UL 508A Panels
- Turn Key Systems
- Thorough water analysis and system design
- Direct and In-Direct feed configurations available
- In-service, system drawings and manual included
- Tags and labeling of system
- 24 / 7 service and support
